

PREDATAIR COLD CLIMATE KIT A700146

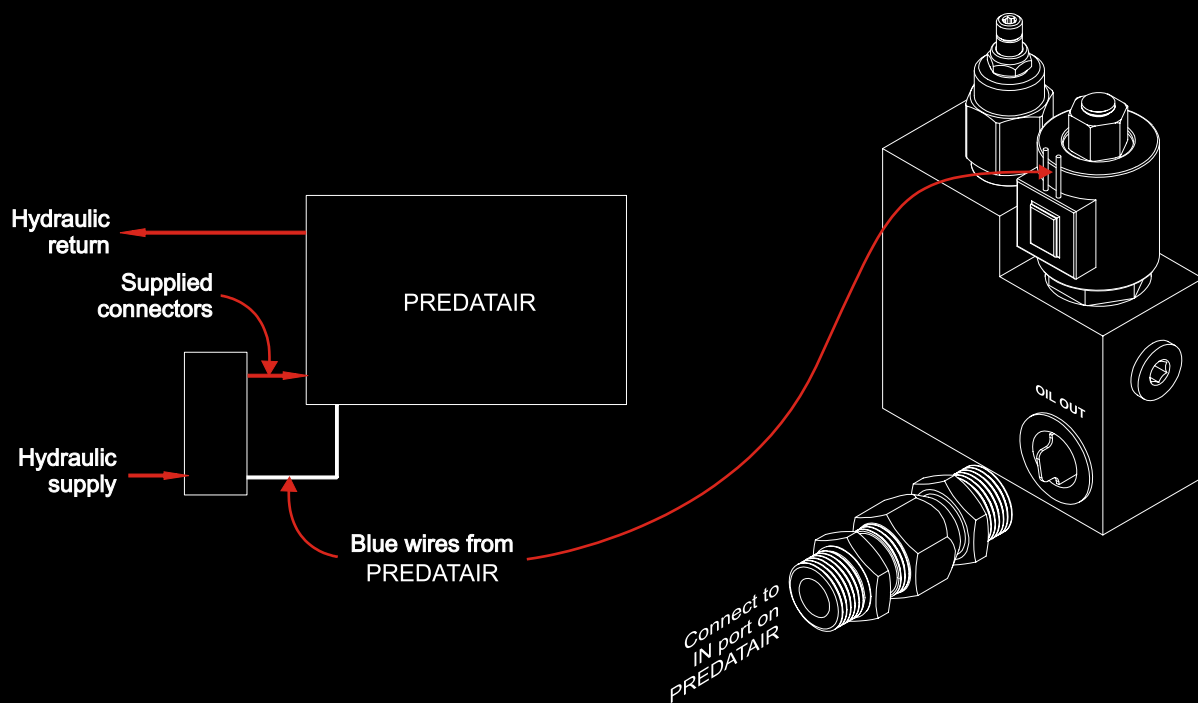

Cold Start Heater Manifold

SPECIFICATIONS

The PREDATAIR Cold Climate Kit is designed for extreme cold weather operation of your PREDATAIR air compressor system.

The Kit is fully automated, activating the solenoid only when hydraulic oil temperature falls below -15°C . When hydraulic oil temperature exceeds -15°C , the Cold Climate Kit solenoid will de-energize, and the hydraulic air compressor will activate automatically.

The kit contains a solenoid valve and a pressure relief valve set at 600 PSI. When activated, the kit will generate a restriction of approximately 3.7 KW @ 14 GPM up to 5.2 KW @ 20 GPM.

BENEFITS

- Warms hydraulic oil quicker in extreme temperatures (below -15°C)
- Fully automatic
- No added attachments or fittings required
- Easy to install
